

IN THE CLAIMS

Claims 1-17 and 21-23 are pending.

Claims 18-20 were previously canceled without prejudice to or disclaimer of the subject matter recited therein.

Claims 1, 13, and 21 are amended herein.

1. **(Currently Amended)** An apparatus ~~for pulling line through a raceway, the apparatus~~ comprising:

~~an attachment member adapted to releasably attach to an end of a fish tape; and~~

a body constructed of metal, and having a plurality of mounting apertures therethrough lying in a common plane, and a plurality of elongated recesses, one of the elongated recesses being positioned between each two consecutive mounting apertures along the length of the body;

an attachment member attached to an end of the body, and adapted to releasably attach to an end of a fish tape; and

at least two lines, each line being attached to a different one of the mounting apertures

~~, wherein the attachment member is attached to an end of the body.~~

2. **(Original)** The apparatus of claim 1, wherein the attachment member releasably attaches to the end of the body.

3. **(Previously Presented)** The apparatus of claim 1, wherein the recesses comprise complementary recesses between the plurality of mounting apertures along the length of the body to provide areas for securing the line to the body.
4. **(Original)** The apparatus of claim 1, wherein the plurality of mounting apertures has rounded convex circumferential edges about the openings of the plurality of mounting apertures.
5. **(Original)** The apparatus of claim 1, wherein the body is flexible.
6. **(Original)** The apparatus of claim 1, wherein the attachment member comprises a hook having a loop attached to the end of the body.
7. **(Original)** The apparatus of claim 1, wherein the body has opposed planar surfaces parallel with the common plane.
8. **(Previously Presented)** The apparatus of claim 1, wherein at least one mounting aperture of the plurality of mounting apertures is configured to have line positioned therethrough and releasably secured thereto.
9. **(Previously Presented)** The apparatus of claim 8, wherein line can be releasably secured to the at least one mounting aperture with tape.

10. **(Original)** The apparatus of claim 1, wherein the plurality of mounting apertures has an inner dimension sized to receive the line.

11. **(Original)** The apparatus of claim 10, wherein the body is sized to fit within the raceway.

12. **(Original)** The apparatus to claim 11, wherein the attachment member is sized to fit within the raceway.

13. **(Currently Amended)** An apparatus ~~for pulling line through a raceway, the apparatus~~ comprising:

multiple lines;

mounting means for supporting the lines ~~line~~, the mounting means having multiple securing means for releasably securing the lines ~~line~~ to the mounting means, wherein each of the multiple lines ~~line~~ is connected to separate securing means, the mounting means further comprising ~~ereneelated~~ recesses disposed between the multiple mounting means for providing an area around which the lines can be secured to the mounting means; and

attachment means for releasably attaching to an end of a fish tape and attached to an end of the mounting means.

14. **(Original)** The apparatus of claim 13, wherein the securing means has an inner dimension sized to receive the line.

15. **(Original)** The apparatus of claim 13, wherein the mounting means is sized to fit within the raceway.

16. **(Original)** The apparatus of claim 13, wherein the attachment means is sized to fit within the raceway.

17. **(Original)** The apparatus of claim 13, wherein the attachment means is releasably attached to the end of the mounting means.

18-20. **(Canceled)**.

21. **(Currently Amended)** An apparatus for pulling line through a raceway, the apparatus comprising:

an undulated body constructed of metal, and having a plurality of expanded mounting apertures along the length of the body for receiving line, and a plurality of elongated recesses providing areas for securing the line to the body, one of the elongated recesses being positioned between each two consecutive mounting apertures along the length of the body; and

an attachment member releasably coupled to the undulated body, the attachment member comprising a loop at one end thereof releasably coupling the attachment member to the undulated body, and a hook disposed at an opposed end thereof for releasably coupling the attachment member to a fish tape.

22. **(Previously Presented)** The apparatus of claim 21, wherein each of the mounting apertures has rounded convex circumferential edges about the opening of the mounting aperture.

23. **(Previously Presented)** The apparatus of claim 21, further comprising a plurality of lines extending through respective ones of the plurality of mounting apertures, the lines being folded through the mounting apertures and secured to the recesses of the body by tape.
